

ive[®]

incontinstop

INCONTINSTOP, FUNCTUAL, PROVEN **for avoiding involuntary leakage of urine**

IVE[®] is a natural food supplement that, thanks to its characteristics, helps to slow down the changes in women's urinary system and is intended for use in case of involuntary leakage of urine. The product will be especially appreciated by women during and after menopause. It helps to eliminate involuntary urine leakage when the urinary system undergoes natural changes.

-  **It facilitates the natural function of the urinary bladder.**
-  **It is a non-hormonal product.**
-  **It helps in case of menopausal disorders.**

30 and 60 capsules.

For the self-confidence of a mature woman

**A natural product
for avoiding involuntary leakage of urine
For the self-confidence of a mature woman**

Incontinence affects 15 to 30 percent of women in all aspects of daily life: physically, socially, and psychically, or also in sex, at home and at work. Women suffering from incontinence might not participate in many day-to-day activities. Subsequently, it adversely affects their social relationships, partnerships, sexual relations, professional integration and general well-being. Also work at home, relaxation during free time and hobbies may be affected. Women suffering from incontinence have to make compromises in their lives according to the availability of toilets to avoid potentially unpleasant situations.

How effective is IVE?

The primary active ingredient in this special product is the **IncontinStop™ system**. This is a unique blend of specially processed isoflavons extracted from haulm and soya (*Glycine max.*), lignans extracted from seeds of cultivated flax (*Linum usitatissimum L.*), and flavonolignans extracted from seeds of milk thistle (*Silybum marianum Gaertn.*).

IVE® helps to reduce estrogen levels

Incontinence often appears during menopause and post-menopause, a period of time characterised by a decrease of female hormones, especially estrogen. Decreased estrogen levels have a negative effect on the morphology and performance of the lower urinary tract. Concerning these issues, supplementary food support of natural substances, mainly isoflavons and lignans with proved modulation effects on estrogen receptors, is promising.

Use of IVE preparation

The action of IVE is gradual, with effects appearing after two or three weeks of regular usage. We recommend the use of the product for two or three months. The effects last for approximately two weeks after the discontinuation of use. The product is gentle and safe for women's bodies. For the best results, we recommend regime adjustments and regular exercise focused on the critical parts.

Dosage: 1 capsule daily

Ingredients in 1 capsule: *Microsome flavonolignans complex (firming ingredient: dextrin, emulsifier lecithin, extract from the seeds of milk thistle, firming agent: citrus pectin, seed oil, pumpkin), dry extract from the stems of red clover, dry extract from the fruit of soy, fillers: inulin, dry extract from the seeds of flax, EFLA - extract from the seeds of pumpkins general, anti-caking agent: magnesium stearate, capsule: gelatin, dye: titanium dioxide (E171).*
